

AI Prompt Log

This assignment used AI assistance for understanding the project requirements, planning the workflow, setting up Git, writing and testing Bash scripts, creating a README file, and preparing final submission steps.

Main prompts used included:

1. Understanding the assignment requirements and submission structure.
2. Setting up the project folder using WSL, Git, and GitHub.
3. Creating and testing the clean script.
4. Adding error handling to the clean script.
5. Implementing data cleaning using awk.
6. Testing removal of empty fields, duplicate rows, zero likes/dislikes, and the ratings_disabled column.
7. Creating and testing the analyse script.
8. Calculating most frequent video ID, mean views, maximum dislikes, engagement rate, and sentiment rate.
9. Updating the README file.
10. Preparing final submission files including git_backup and zip file.
